

Group 4 — Barcelona Mycorrhizal

Session 3 · CRISP-DM Data Preparation · Team Briefing

Strategic direction — read this first

STOP. Do not build or improve any frontend, map UI, or visualisation. The teacher will not review it. The explainer map exists — leave it alone.

DO THIS INSTEAD. Show clearly: how you are processing your data, why you made each decision, and for whom the data is being prepared. The deliverable is a defensible, documented data pipeline — not a product.

The three questions every notebook must answer:

- **How?** What steps transform raw data into a usable layer (filter, clean, derive, validate)
- **Why?** What design decision drove each step — and what would break if you skipped it
- **For whom?** Urban planners and city ecologists making intervention decisions in Barcelona — someone who needs to trust the numbers, not just see a map

What the teacher said

The work is done — the map, the scoring, the connectivity analysis. What is missing is the **documented data preparation process**. The teacher follows CRISP-DM and wants to see, for every dataset:

- How rows were filtered — print counts **before and after** every filter
- Design decisions: which rows belong, which columns matter, why
- How missing values were handled: **drop / impute / flag / model**
- Unit standardisation (metres, Celsius, unitless NDVI — all stated explicitly)
- Defensive bounds checks (NDVI -1 to 1, LST 15–55 °C, coordinates in Barcelona bbox)
- Each team member contributes **their own data layer** with a full notebook

How to get started — activate the task guide

The repo has a built-in task guide that prevents two people from working on the same thing. Open the project in **Claude Code** and type:

```
/tasks-for-mushrooms
```

Claude will:

- Ask your name and save your profile
- Show you which tasks are still unclaimed
- Let you pick one — your claim is written instantly
- Print the full task description so you can start immediately

Note: Dominika and Juan — your personal data layer tasks (D-DOMINIKA / D-JUAN) are already pre-claimed to your names. The skill will show them to you first.

Available tasks at a glance

ID	Track	Task	Pre-assigned
P1	PROCESS	Retrofit notebook 02 — grid-trees	—
P2	PROCESS	Retrofit notebook 03 — scoring	—
P3	PROCESS	Retrofit notebook 04 — connectivity	—
P4	PROCESS	Retrofit notebook 05 — visualisation	—
P5	PROCESS	New validation notebook — bounds assertions	—
D-DOMINIKA	DATA	Dominika's personal data layer + notebook	Dominika
D-JUAN	DATA	Juan's personal data layer + notebook	Juan
DO1	DOCS	Write the Session 3 README	—
DO2	DOCS	Restructure data-quality-audit with CRISP-DM framing	—

Rules

- Claim your task *before* starting — edit session-3/task-ownership.yaml or use the skill
- Only Rafik can release a claimed task
- Push your work to **main** when done and set your task status to done
- If a task has been claimed 7+ days with no update, flag it to Rafik
